

1 **GLAZING PANEL INSTALLATION STRUCTURE AND METHOD**

2

3 Abstract of the Disclosure

4 An installation structure and method for installing and removing a sacrificial
5 glazing panel in a frame having a perimeter channel in which a deeper channel section is formed
6 in the frame receiving an edge of the glazing panel to allow forcible shifting of the glazing panel
7 so that an opposite edge clears the lip of an opposite channel section during installation and
8 removal. A positioner element such as bowed leaf spring may be installed to reposition the
9 glazing panel after the glazing panel is released so that the opposite edge is located to be retained
10 by the lip after release.
